As an XM Satellite Radio subscriber I urge the FCC to reject the National Association of Broadcaster's petition 04-160. Satellite radio has shown itself to be fair, innovative and responsible in providing quality programming and public service radio. To prevent it from also providing updated traffic and weather would only hinder the public's right, and need, to have valuable information---possibly even life saving information---on a timely and consistant basis.

Again, I strongly urge the FCC to reject NAB petition 04-160.

Respectfly,  
James Alford
